Executive Summary

Ticker	Score	Grade	Signal	Price (10/27)	Action
AAPL	64/100	B	Hold / Accumulate	$347.10	Wait for Nov 2 earnings; buy a dip to $331-338 (stop $327) or a close above $351.73 (stop $338)
BTC/USD	48/100	C	Neutral	$80,820	Stay out; buy only on a positive 28-day momentum Sunday or a daily close above $84k (stop $78.5k)

Top conviction: none. Neither analysis supports buying today; both say wait for a dated event to resolve.

Biggest risk flags: AAPL at ~40x trailing earnings into a high guidance bar (last print -7.35%). BTC in a descending triangle on $79.1k with a hiking Fed and ~70% of Binance accounts long.

Only tested evidence: the repo's 28-day crypto momentum rule (trading-desk/trend), which is in cash since 10/25. Its backtest missed its own significance bar (p = 0.025 vs 0.0167), so it is used as a risk filter, not a forecast.

Signal labels: the stock pages use the PDF script's labels, which call a 40-54 score CAUTION. The analysis files call a C grade Neutral; it is the same score band.

Upcoming Catalysts

Date	Ticker	Event	Impact
Wed Oct 28	BTC	FOMC decision + press conference	Very high
Fri Oct 30	BTC	Deribit monthly expiry (~$11B, max pain $76-79k)	High
Sun Nov 1 / 8 / 15	BTC	Momentum checks: need > $86,480 / $83,679 / $82,018	Entry trigger
Mon Nov 2	AAPL	FQ4 earnings + Dec-quarter guide (first Ternus call); implied +/-4.5%	Very high
Tue Nov 10	Both	October CPI (December hike odds)	High
Dec 8-9	Both	FOMC	High
By Dec 31	AAPL	Gemini-powered Siri due	Medium-High
Late Jan 2027	AAPL	FQ1 FY27 report	High

Technical Overview

Key Levels

Level	Price	Notes
Resistance 3	$365.80 - $374	Fib 1.272 ext / measured move of base
Resistance 2	$350.74 - $351.73	Upper Bollinger + all-time high (10/23)
Resistance 1	$348.36	10/22 high; supply at $346-348
Current Price	$347.10	10/27/2026 close
Support 1	$338.70 - $341	10/20 swing low, EMA/SMA20, Fib 23.6%
Support 2	$329.40 - $333	Swing low, SMA/EMA50, Fib 38.2%, implied-move low
Support 3	$300 - $302	Aug post-earnings low, EMA200

Indicator Readings

Indicator	Value	Interpretation
Trend	Uptrend	Price > EMA20 341.0 > EMA50 332.7 > EMA200 301.8, all rising; higher lows 300 / 329 / 339
RSI (14)	61.1	Rising (50.9 -> 61.1 over 20 days), room before overbought
MACD	4.20 vs 4.10	Fresh bullish cross, histogram only +0.09 (weak)
Stochastic	%K 78 / %D 74	Near overbought
Volume / OBV	39.1M vs 39.0M avg	OBV +179M shares in 20d = accumulation; participation flat
Bollinger	Width 0.063	Squeeze vs 6-month median 0.115; earnings likely trigger
50/200 SMA	+$36 spread	Golden cross intact
Rel. Strength	1y +32.6% vs SPY +14.9%	Leads on 6m/1y, lags on 3m (+2.7% vs SPY +5.8%)

Fundamental Overview

Key Metrics

Metric	Value	Sector Avg	Assessment
Trailing P/E (GAAP)	39.8x	5y avg ~30.7x	~30% above own history
Forward P/E	35.2x	Hardware ~17.5x	~2x sector
PEG (fwd)	~4.4	5y avg ~2.7	Expensive
P/FCF	36.7x	10y median 25.7x	Rich; FCF yield ~2.7%
Revenue Growth (FQ3 YoY)	+16.4%	FQ4 guide +9-11%	Strong, guided to slow
EPS Growth (FQ3 YoY)	+29%	n/a	+22% ex-tariff refund
Gross Margin	50.1%	FQ4 guide 47-48%	48.1% ex-refund; memory squeeze
Operating Margin (TTM)	~33%	n/a	Exceptional
Net Cash	~$62B	D/E 0.78	Fortress balance sheet

Valuation Assessment

Significantly overvalued on every multiple (Valuation 4/20) while business quality is near the top of the scale (Profitability 18, Health 17, Moat 19). Forward EPS of $9.57 implies only ~8% growth over FY26E ~$8.89, yet the stock trades at 35x forward, 40x trailing and above the $340 consensus target. FQ3 EPS of $2.02 included a $0.11 tariff refund; gross margin included ~2pts of the same one-off.

Competitive Moat

Moat Rating: Wide

- Ecosystem switching costs; installed base at an all-time high
- Brand and pricing power (iPhone Duo opens a ~$1,999 tier)
- App Store / Services platform growing ~12% a year
- Custom silicon IP and supply-chain scale

Investment Thesis

Bull Case

1. iPhone Duo ramp: preorders sold out, build target reportedly raised ~44% to ~14M units (unconfirmed)
2. Services +12% plus Gemini-powered Siri due by year-end opens a new AI/subscription leg
3. ~$137B FCF and $62B buybacks in 9 months shrink share count; ~$62B net cash
4. Rising MA stack, higher lows and a Bollinger squeeze just under the all-time high
5. Analysts raising targets: JPMorgan $360, BofA $370, Evercore $380

Bear Case

1. Reported ~15% cut to iPhone 18 Pro component orders; Duo may cannibalize Pro Max
2. Gross margin guided to 47-48% from a tariff-flattered 50.1%; memory squeeze until 2027
3. 40x trailing, PEG ~4.4, price above the $340.39 consensus target
4. High earnings bar: consensus revenue above implied guide; 8 of last 13 prints traded down, last one -7.35%
5. Regulatory tail: appeal to ban Google search payments (~$20B/yr), EU DMA, App Store, DOJ

Catalyst Timeline

Event	Expected Date	Potential Impact
FQ4 earnings + Dec-qtr guide	Nov 2, 2026	Very high: implied +/-4.5%
Ex-dividend ~$0.27 (est.)	~Nov 9, 2026	Low
Holiday / Duo sell-through	Late Nov-Dec 2026	Medium
Gemini-powered Siri	By Dec 31, 2026	Medium-High
FQ1 FY27 report	Late Jan 2027	High

Entry / Exit Strategy

Parameter	Level
Entry Zone	**After Nov 2: $331-338 dip / $352-358 breakout**
Price Target	**T1 $365, T2 $374-400**
Stop Loss	**$327 (dip) / $338 (breakout)**
Timeframe	**3-6 months**

Risk & Position Sizing

Risk / Reward Analysis

Risk Metric	Value
Risk/Reward Ratio	**~1.1:1 now; ~4:1 on $331-338 dip**
Recommended Position Size	2-3% (cap 5%), risk <=0.5% of equity
Max Drawdown Scenario	-7.4% earnings gap; -33% worst case
Volatility Profile	ATR 1.83%, HV30 15.6%, implied +/-4.5%
Market Correlation	Use beta ~1.1 (short-window 0.29 distorted)

Position Sizing Methodology

Fixed-fractional: shares = 0.5% x equity / (entry - stop). Size for a -7% to -8% overnight gap, not just the stop distance, because stops cannot fill inside an earnings gap. Existing holders: trim to ~2% or collar before Nov 2 (rich implied volatility helps pay for puts). Kelly not computed: no validated win rate or payoff estimate.

Scenario Analysis

Scenario	Probability	Expected Return	Trigger
Bull Case	30%	**+15% ($400 by Apr 2027)**	Strong Dec-qtr guide, Duo ramp, Gemini Siri ships
Base Case	45%	**+4% ($360)**	In-line print, guide near consensus
Bear Case	25%	**-13% ($302, 1-3 months)**	Guide miss, gross margin below 47%, Pro demand weakness confirmed

Thesis Conviction	47/100	15%	Mixed

Technical Overview

Key Levels

Level	Price	Notes
Resistance 3	$86,600 - $87,400	Triple top (9/21, 10/2, 10/5)
Resistance 2	$84,000 - $84,840	Upper band, 10/21 high, triangle top
Resistance 1	$81,300 - $81,900	ETF cost basis, EMA20, SMA20/50
Current Price	$80,820	10/27/2026 UTC close
Support 1	$79,100 - $80,000	Triangle base (5 tests), Fib 0.236
Support 2	$74,900 - $75,900	Strongest: 9/15 low, Fib 0.382, 50w SMA
Support 3	$72,600 - $73,100	SMA200, Fib 0.5

Indicator Readings

Indicator	Value	Interpretation
Trend	Mixed	Below EMA20/SMA50 (~81.8k), above rising EMA200 76.3k; golden cross intact
RSI (14)	45.5	Down from 52.8 twenty days ago
MACD	-456 vs -148	Bearish; histogram improving but negative
Stochastic	%K 29 / %D 20	Turning up from oversold, unconfirmed
Volume / OBV	OBV -65B (20d)	Bearish divergence; volume shrinking
Bollinger	Width 0.053	Squeeze vs 0.089 median; FOMC likely trigger
Pattern	Desc. triangle	Break of $79.1k targets ~$71k; close > $84.9k cancels
28d momentum rule	CASH since 10/25	Repo's tested rule; 28d return -5.25%

Fundamental Overview

Key Metrics

Metric	Value	Sector Avg	Assessment
MVRV	~1.5	Tops 2.5-3.5	Fair; far from top
Mayer multiple	1.11	Tops > 2.4	Neutral
Realized price	~$54k	STH ~$74-75k	Spot ~8% above STH cost
Miner all-in cost	~$78-80k	Spot $80.8k	Near soft floor
Exchange reserves	~2.68M BTC	3-year low	Constructive
Hash rate (7d)	> 1 ZH/s	First since Mar	Security recovered
Active addresses	~660k	939k Aug 2025	Usage weak
Stablecoin supply	~$301-308B	$322B high May	Dry powder shrinking
Spot ETF AUM	~$108.9B	Oct flows < 0	Holders underwater

Valuation Assessment

No earnings or P/E, so valuation uses on-chain measures. MVRV ~1.5 and a Mayer multiple of 1.11 put BTC at fair-to-slightly-cheap versus its own history, with price near miner all-in cost (~$78-80k). Adoption is the weak spot: active addresses are down 30%+ from 2025, fees are near decade lows, stablecoin supply is shrinking, and the CLARITY Act failed cloture 49-50 on 9/15.

Competitive Moat

Moat Rating: Wide

- 17-year Lindy, largest network effect, liquidity and hash power
- Regulated ETF wrappers and 'digital gold' brand
- Store-of-value role not directly contested by ETH or stablecoins
- Main long-run threat: quantum (BIP-360 draft, BIP-361 contested)

Investment Thesis

Bull Case

1. On-chain valuation fair/cheap (MVRV ~1.5) with price near miner cost
2. Long-term trend intact: golden cross, above rising 200-day and 50-week MAs
3. Exchange reserves at 3-year low; long-term holders accumulating
4. Post-10/30 expiry unpins price; call-heavy OI at $95k can fuel a squeeze
5. Mt. Gox overhang pushed to 10/2027; strategic-reserve hints

Bear Case

1. Descending triangle on $79.1k with falling OBV; measured move ~$71k
2. Fed hiking (3.75-4.00%), December hike priced ~76-94%; beta ~1.6
3. October ETF outflows, holders below ~$81.3k cost basis; Strategy slowing
4. ~69.5% of Binance accounts long: liquidation cascade risk below $79.25k
5. CLARITY Act failed 49-50; fees and active addresses weak

Catalyst Timeline

Event	Expected Date	Potential Impact
FOMC decision + presser	Oct 28, 2026	Very high
Deribit monthly expiry (~$11B)	Oct 30, 2026	High: max pain $76-79k
Momentum checks (Sun closes)	Nov 1 / 8 / 15	Need > $86.5k / $83.7k / $82.0k
October CPI	Nov 10, 2026	High: Dec hike odds
FOMC	Dec 8-9, 2026	High

Entry / Exit Strategy

Parameter	Level
Entry Zone	**On trigger only: $82,000 - $84,500**
Price Target	**T1 $86,600, T2 $95,000**
Stop Loss	**$78,500 daily close**
Timeframe	**4-10 weeks**

Risk & Position Sizing

Risk / Reward Analysis

Risk Metric	Value
Risk/Reward Ratio	**~0.7:1 to T1, ~2.5:1 to T2**
Recommended Position Size	2-3% (cap 5%), spot only, no leverage
Max Drawdown Scenario	-27.5% to 2026 low; -75% to -85% cycle tail
Volatility Profile	ATR 2.45%, HV30 25.3%, HV1y 44.2%
Market Correlation	Beta ~1.55-1.60 vs SPY, corr ~0.45

Position Sizing Methodology

Enter only on trigger A (a Sunday close with a positive 28-day return) or trigger B (a daily close above $84k after FOMC). Risk at most 0.5-0.75% of equity and allow 1.5x the stop distance for slippage (weekend books, liquidation cascades). Half of standard size because the momentum backtest (Sharpe 1.42 vs 0.93, max drawdown -48% vs -76%) missed its pre-set $p < 0.0167$ bar ($p = 0.025$). Kelly not computed.

Scenario Analysis

Scenario	Probability	Expected Return	Trigger
Bull Case	25%	**+18% to +24%**	Dovish FOMC, expiry unpins, reclaim $84k
Base Case	45%	**$75k-$88k range**	Hold priced in, chop into CPI
Bear Case	30%	**-10% ($72-73k)**	Hawkish Fed, $79.1k breaks, ETF outflows
